

Medication and Drug Overdose in Nash County

Technical Notes

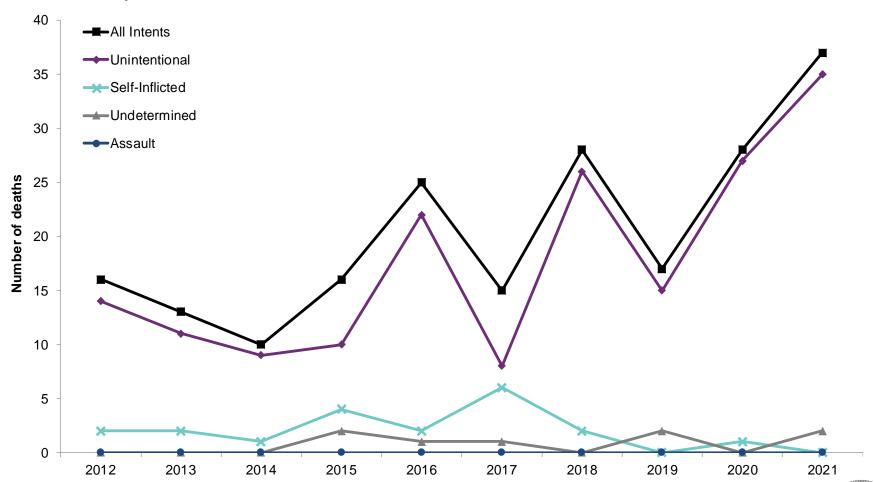

- The fatality data provided here are part of the Vital Registry System of the State Center for Health Statistics (SCHS) and have been used to track and monitor the drug overdose burden in NC using ICD-10 codes. Surveillance using ICD-10 codes relies on the immense efforts of the NC Office of the Chief Medical Examiner (OCME) to investigate overdose deaths in NC.
- Individual ICD-10 codes do not exist for each specific substance involved in overdose.
 Other Synthetic Narcotics (T40.4) includes several substances but the majority of deaths with this code involved fentanyl. Similarly, psychostimulants with abuse potential (T43.6) is used for methamphetamine surveillance.
- Counts and rates are limited to NC residents. When calculating rates, higher counts
 provide greater reliability, therefore years are often grouped. Use caution when
 interpreting rates for counts from 5 9. Counts from 1 4 are considered unstable and
 therefore have a low reliability; rates are not calculated for these counts.
- Population estimates for 2021 are subject to change.
- Speaking and technical notes should be read prior to using.
