The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on deaths that occur in North Carolina resulting from violence: homicide, suicide, unintentional firearm deaths, legal intervention, and deaths for which intent could not be determined. NC-VDRS is a multi-source system that gathers information from death certificates, medical examiner reports, and law enforcement reports. The goal of this system is to aid researchers, legislators, and community interest groups in the development of public health prevention strategies to reduce violent deaths. All deaths reported in this document are based on location of occurrence rather than residence and, instead of a rate, the occurrent ratio is reported. This statistic is derived from the total number of violent deaths resulting from injuries in a specified geographic region divided by the number of residents in this region. This document summarizes all fatal injuries from violence that occurred in Cabarrus County for the years 2009-2018.

- In Cabarrus County, the suicide ratio was 3.8 times higher in males than in females, and the homicide ratio was 3.0 times higher in males than in females.
- Patterns of suicide and homicide differed by race. Suicide victims were more likely to be non-Hispanic (NH) white than non-Hispanic Black. NH whites had 19.1 suicides per 100,000 population versus 5.6 suicides per 100,000 population in NH Blacks. All other racial groups combined had 12 suicides.
- In contrast, NH Blacks had 10.9 homicides per 100,000 population as opposed to NH whites who had 2.5 homicides per 100,000 population. All other racial groups combined had 10 homicides.

- For the years 2009-2018, there were 341 violent deaths from injuries sustained in Cabarrus County. Of these 341 deaths, 324 were N.C. residents (95.0%) and 304 were Cabarrus County residents (89.1%).
- There were 252 suicides (73.9%), 79 homicides (23.2%), one unintentional firearm death (0.3%), two deaths from legal intervention (0.6%), and seven deaths of undetermined intent (2.1%).

**Manner of Death: Cabarrus County, N.C.: NC-VDRS, 2009-2018***

- Suicide 74%
- Homicide 23%
- Unintentional Firearm 0%
- Legal Intervention 1%
- Undetermined Intent 2%

*Based on the county of injury occurrence.

*Other race refers to Hispanics, American Indians, Asians, other races, and unspecified or unknown race.

*Rate per 100,000 (number of occurrent injuries resulting in death per 100,000 population; based on the county of injury occurrence).
Suicides and homicides displayed dissimilar age patterns. Homicides peaked among those aged 20-24 with 13.9 homicides per 100,000, where suicides peaked among those aged 85 and older with 29.4 suicides per 100,000.

Nearly three quarters of homicides (70.9%) and more than half of suicides (55.6%) were committed using firearms.

Suspicion of intoxication was reported in 22.8% of homicides and in 23.8% of suicides.

For homicide incidents where one or more suspects were identified, the relationship of the victim to the suspect was known (current or former spouse/boyfriend/girlfriend, family, friend or acquaintance) more frequently for female (81.8%) than for male (54.4%) victims.
