Data Source: North Carolina State Center for Health Statistics, Vital Statistics Death Certificate Data.

Note: Deaths included are limited to North Carolina Residents. Acute causes of alcohol attributable deaths, including injuries, take place in the short-term. Figures are calculated using Alcohol-Related Disease Impact (ARDI) methodology from the CDC, which provides estimates of alcohol related harms. This methodology was recently updated in 2022 to reflect the most recent literature, which affected alcohol-attributable fractions, conditions, and cause of death codes. Therefore, this version is not comparable to estimates of alcohol-attributable deaths previously released by the state of North Carolina. Estimates have been rounded to the nearest whole number; this may result in a slight difference in the 'Total' column due to rounding. These causes of death include 18 alcohol-related injuries (ex: poisonings, falls, homicide, suicide). For more information, please visit <https://www.cdc.gov/alcohol/ardi/methods.html>.
