*Estimates that are less than 10 deaths should be interpreted with caution.

Note: Deaths included are limited to North Carolina residents. All causes of alcohol-attributable deaths include deaths from both short- and long-term excessive use of alcohol. Figures are calculated using the Alcohol-Related Disease Impact (ARDI) methodology from the CDC, which provides estimates of alcohol related harms. This methodology was updated in 2024 to reflect the most recent literature, which affected alcohol-attributable fractions. Therefore, this version is not comparable to estimates of alcohol-attributable deaths previously released by the state of North Carolina. Estimates have been rounded to the nearest whole number; this may result in a slight difference in the 'Total' column due to rounding. These causes of death include 40 alcohol-related chronic diseases (ex: liver cirrhosis, alcohol dependence) and 18 alcohol-related injuries (ex: poisonings, falls, homicide, suicide). For more information, please visit https://www.cdc.gov/alcohol/ardi/methods.html.
